Vision of the Department

• Creating eminent and ethical leaders in the domain of Computational Sciences through quality professional education with a focus on holistic learning and excellence.

Mission of the Department

- To create technically competent and ethically conscious graduates in the field of Computer Science and Engineering by encouraging holistic learning and excellence.
- To prepare students for careers in Industry, Academia and the Government.
- To instill Entrepreneurial Orientation and research motivation among the students of the department.
- To emerge as a leader in education in the region by encouraging teaching, learning, industry and societal connect.

Advantages & Disadvantages

1. Advantages

- i. High accuracy
- ii. Automatic extraction of features

2. <u>Disadvantages</u>

- i. Classifies input images to atmost 7 facial expressions
- ii. Less accuracy for disgust and surprise expressions

Proposed system

- 1. Application to identify the bhavas from the given input facial image
- 2. Using CNN architecture and appropriate dataset we can train the system to classify them to bhavas
- 3. This application allows the normal users (Other than dancers) to easily understand the bhavas.

JYOTHI HILLS, VETTIKATTIRI P.O, CHERUTHURUTHY, THRISSUR. PIN-679531 PH: +91-4884-259000, 274423 FAX: 04884-274777

NBA accredited B.Tech Programme in Civil Engineering valid for the academic years 2019-2022.

Features of the proposed system

- 1. The first 3 CNNs are used to segment eyes, lips and the cheeks regions from facial images because of the importance of these regions to recognize the bhavas
- 2. Using the first 3 CNN outputs, the proposed system forms a face-iconized image that is used by the fourth CNN as input
- 3. Every image block is classified as eyes, lips and the cheeks versus background
- 4. Then the training masks are generated by detecting and localizing facial landmarks on a face image
- 5. Training masks are used for determining majority and mixed classes in the facial component segmentation step
- 6. Softmax layer is used for classification and images are classified into bhavas

JYOTHI HILLS, VETTIKATTIRI P.O, CHERUTHURUTHY, THRISSUR. PIN-679531 PH: +91-4884-259000, 274423 FAX: 04884-274777

Modules of proposed system

1. Data Pre-processing -

- → firstly normalizing data per image and then normalizing data per pixel
- → Normalizing data per image:
 - Subtract from each image the mean value over that image
 - Set appropriate value for the standard deviation of the image
- → Normalizing data per pixel:
 - Compute the mean image over the training set
 - o For each training image, subtract from each pixel its mean value
 - Set the standard deviation of each pixel over all training images

2. Feature Extraction -

- → The extraction of facial features requires translating the input data into a set of features
- → Features included in this project are eyes, lips and cheeks
- → First three CNNs are trained to segment eye, lip and cheek regions from facial image
- → Every image block is classified as eye, lips and the cheeks versus background
- → The training masks are generated by detecting and localizing facial landmarks on a face image
- → Training masks are used for determining majority and mixed classes in the facial component segmentation step

3. Identification and Classification -

- → Softmax layer is used for classification
- → Classify image to bhavas
